ORGANIZATION BACKGROUND

Women's Institute of Technology and Innovation (WITI) is a Code Academy founded by Women In Technology Uganda (WITU) with a strong vision to close the technological gender gap in Uganda. Located in Kamokya, Kanjokya Street, opposite Cavendish University, WITI focuses on empowering young women with the necessary skills to excel in the technology sector. The institute offers a Diploma in Computer Science and Entrepreneurship, catering to female students who have completed the Ugandan Advanced Certificate of Education (UACE) with a science-focused curriculum at their A-level.

PROBLEM STATEMENT

The Women's Institute of Technology and Innovation (WITI) currently relies on file-based approaches for managing student records and paper-based methods for attendance tracking. This leads to duplication of records, frequent errors in record-keeping and attendance tracking, delays in accessing vital information. The absence of a centralized system hinders efficient data management and timely decision-making, affecting both students and staff.

MAIN OBJECTIVE OF THE STUDENT MANAGEMENT SYSTEM (SMS)

The main objective of this project is to design and implement a comprehensive Student Management System (SMS) WITI that digitizes students records management. This system aims to replace the file-based approaches and paper-based methods with a centralized digital solution improving accuracy, eliminating data redundancy, ease accessibility and operational efficiency.

SPECIFIC OBJECTIVES OF THE PROPOSED STUDENT MANAGEMENT SYSTEM (SMS)

1. To gather requirements for the proposed digital system.
2. Design the process flows for the proposed system.

3. Develop a digitized Student Management System.
4. Test, Deploy and Implement the proposed system.

CONTRIBUTION OF THE STUDY

This study contributes to the enhancement of WITI's operational efficiency by transitioning from the existing manual processes to a modern digital system. The implementation of the Student Management System is expected to improve data accuracy of student records, eliminate data redundancy and streamline administrative tasks.

JUSTIFICATION OF THE STUDY

The Student Management System addresses the inefficiencies that arise from managing student data in the existing file-based system. By digitizing the student management system, we shall have centralized information management which in turn makes general administration easier and more efficient.

SCOPE OF THE STUDY

The scope of this study includes the design and development of a Student Management System specifically for WITI. It will focus on creating a digitized and centralized students records management system to track most of the student activity within the school. The project will focus on operations that directly apply to the students. This will lay the groundwork for potential future enhancements, such as integrating learning management features.
